

AGAMER White Paper

Version 1.1 — 18 Oct 2026.

1. Abstract

AGAMER is a community token on The Open Network (TON), launched on 20 April 2025 as the official coin of the Agamer channel. It is designed to be the main currency of **Agamer Universe**, a Telegram gaming hub with several games, together with the Agamer NFT collection (total supply stays 1,000: a part moves to Solana permanently, and a part stays on TON permanently). The contract's admin rights are revoked, so supply can never be increased. AGAMER trades in 5 liquidity pools on STON.fi and DeDust.

Agamer Universe stays on TON: mini games, giveaways and similar as before, coin freezing as planned, and a hub for games from other developers. AGAMER also launches on Solana on 19 Jan 2027. There are no hubs on Solana. The coin launches there, and a big Agamer game is announced, which the team builds itself (Q2 2027 at the earliest). It is a 3D open-world game with Solana and Agamer NFTs. The first version is a prototype (playable core: character, controls, a small map, wallet connection, and NFTs shown in the game), then one polished location, then growth into a large open world with multiplayer. TON AGAMER stays on TON forever as the original token. Holders choose what to do with their coin: stay on TON, move to Solana, or have both. Only Rare, Epic and Legendary NFTs can move to Solana, and only before the prototype of the game is released. The schedule is in the roadmap.

2. Vision and problem

Many community tokens are given away through airdrops and have no lasting use. Agamer's stated approach (channel post, 30 Jan 2026) is "No meaningless airdrops": AGAMER is earned through gameplay and utility inside Agamer Universe, and Agamer NFTs give real in-game utility, where rarity matters and holders can win cash prizes, valuable items and other real-world rewards.

Long-term vision: Agamer wants to grow into a full gaming hub, Agamer Universe, on TON, where AGAMER is the main in-game currency and Agamer NFTs give status, access and real rewards. That hub includes games from other developers. The project plans to expand into minigames and interactive

challenges, to build its own art, lore and storytelling, to work with creators, artists and gaming communities, and to form cross-project partnerships in Web3 and gaming. Target audience: Telegram and TON gamers, NFT collectors and the Agamer community.

3. The AGAMER token

Token at a glance

Name / ticker	AGAMER coin / **AGAMER**
Blockchain	TON (Jetton standard)
Contract	`EQA5qN_40wF_i8ZPfX5YD-ypK-PagNSbvSrrtqYDZ45pbIKs`
Decimals	9
Initial supply	1,000,000 AGAMER (launch announcement, 20 Apr 2025)
Current total supply	**999,000 AGAMER** (1,000 AGAMER burned), as of 13 Oct 2026
Admin rights	**Revoked** — admin is the zero address, so no one can mint new tokens or change the contract
Launch	20 Apr 2025, liquidity first added on STON.fi

Burn history: the supply announced at launch was 1,000,000 AGAMER. The current on-chain supply is 999,000. The project creator burned 1,000 AGAMER.

4. Tokenomics

Allocation

Allocation	Share	Amount	Vesting / lock
Organic distribution — rewards to active community participants	not fixed	—	none
Burned by the project creator	0.10%	1,000	permanent

AGAMER had no pre-set allocation split and no vesting schedule. According to the founder, tokens were handed out over time as rewards to active community members (giveaways, airdrops to holders, contests), and part of the supply was added as DEX liquidity. You can check the current distribution on-chain on Tonviewer.

Utility: AGAMER is the main currency of Agamer Universe, which stays on TON. It is earned through gameplay and utility rather than meaningless airdrops, and it is meant for in-game payments and rewards. Holdings are already used as entry requirements and tickets for community giveaways (for example "100 Agamer = 1 ticket" and "1000+ Agamer to join"), and AGAMER is used for Agamer NFT upgrades and promotions through the Agamer wheel. Coin freezing is planned. Additional sinks and burns: to be announced.

AGAMER on Solana

AGAMER on Solana launches on 19 Jan 2027. Supply is 999,000, the same as on TON. A public snapshot of TON AGAMER balances is taken on 1 Jan 2027. The burn window is 1-18 Jan 2027: holders burn TON AGAMER at 10 to 1 (100 AGAMER on TON gives 10 on Solana). Of the Solana supply, 10% is reserved for the swap, 20% goes to the liquidity pool, and 70% is locked by smart contract with public terms. The unswapped part of the swap reserve is frozen with the 70%. There are no hubs on Solana. The coin launches there, and a big Agamer game is announced, which the team builds itself (Q2 2027 at the earliest). It is a 3D open-world game with Solana and Agamer NFTs. The first version is a prototype (playable core: character, controls, a small map, wallet connection, and NFTs shown in the game), then one polished location, then growth into a large open world with multiplayer. TON AGAMER stays on TON forever as the original token. Trading and pools stay. LP tokens are burned so liquidity cannot be withdrawn.

Current holder distribution can be checked on-chain on Tonviewer (`EQA5qN_40wF_i8ZPfX5YD-ypK-PagNSbvSrrtqYDZ45pbIKs`). Tokens were burned (supply reduced) rather than sent to a dead address.

5. Ecosystem

- **Agamer Universe** (@agameruniversebot) — stays on TON. It is the gaming hub in a Telegram bot: mini games, giveaways and similar as before, coin freezing as planned, and a hub for games from other developers. It runs the Agamer wheel and Agamer giveaways.
- **Agamer NFT** (getgems.io/agamer) — launched 4 Jul 2025. Rarities are VIP (only 55), Common, Uncommon, Rare, Epic and Legendary. Special editions (Human, Universe, Fire, Unix...) are minted in small fixed batches. NFTs were airdropped to AGAMER holders, and common NFTs can be upgraded through the Agamer wheel. The TON-to-Solana swap for Rare, Epic and Legendary NFTs opens after AGAMER launches on Solana, in a window announced after the Solana launch. The window closes before the prototype of the game is released. After that, swapping a TON Agamer NFT for a Solana one is no longer possible. Only NFTs of rarity Rare, Epic and Legendary can be swapped. VIP, Common and Uncommon NFTs stay on TON forever. Rare to Legendary NFTs were originally designed for the game. The swap is 1:1: the holder gives the TON NFT and receives the same one on Solana. It is one-way and cannot be reversed. Total supply stays 1,000: a part moves to Solana permanently, and a part stays on TON permanently. All Rare, Epic and Legendary NFTs owned by the project and not bought are taken off sale. They will move to Solana and be available for sale only after the prototype is released.
- **AGAMER on Solana** — launches 19 Jan 2027. There are no hubs on Solana. The coin launches there, and a big Agamer game is announced, which the team builds itself (Q2 2027 at the earliest).

It is a 3D open-world game with Solana and Agamer NFTs. The first version is a prototype (playable core: character, controls, a small map, wallet connection, and NFTs shown in the game), then one polished location, then growth into a large open world with multiplayer. Supply, the 10 to 1 burn swap, and the 10% / 20% / 70% split are in section 4 and the roadmap.

- **Agamer Marketplace** — launched in 2025.
- **Community** — channel @agamer_channel (7,563 subscribers), chat @agamer_chat, plus the NFT and holders communities (@agamer_nft, @agamer_community).
- **Website** — agamer.space, first launched in Nov 2025 and rebuilt in Oct 2026.
- **Price widgets** — Android (APK) and iOS (Scriptable) home-screen widgets released in Oct 2026. They show live price, chart, pools and trades from all 5 pools.
- **@AgamerPriceBot** — a Telegram bot released in Oct 2026. Its /price command sends a candlestick chart, /pools lists the pools and /trades shows recent trades (EN/RU/FA). It also posts buy alerts in @agamer_chat.
- **Sticker pack** — AgamerUniverse.

6. Liquidity and markets

DEX	Pair	Pool
STON.fi v2	AGAMER/TON	EQBOXw...Y0w257
DeDust v2	AGAMER/USDT	EQCmqu...cYmoKF
DeDust v2	AGAMER/TON	EQDY9A...6ukYvv
STON.fi v2	AGAMER/USDT	EQBQ76...4AraNs
DeDust	AGAMER/TON	EQAWUK...rXe39f

Liquidity policy: LP tokens are burned so liquidity cannot be withdrawn. One example is visible on-chain: on 26 Aug 2026 aleksionis.ton sent 114.08 AGAMER-GRAM LP tokens to the zero address (tx).

Listings: a CoinGecko request (ID CL1310260032) and a CoinMarketCap request were submitted in Oct 2026. A pull request to the TON community asset list (ton-assets) is open. The token also trades on GeckoTerminal and DexScreener.

7. Community and security

- Admin rights on the jetton are revoked, so it has a fixed supply.
- Official wallets are published, so anyone can check them on-chain:

Official wallets

Wallet	Address
Project / Agamer Universe wallet — agamer-wallet.ton	UQDpPuDTghSF1KAvkKGAlPj0lyXbHP7ZvG3N-ZCcNoGl5_D1
Creator — aleksionis.ton	UQA6-sBoMHIvTpNiOSGHdQ9nybQ2JJISx9Wc6TEhgXuk6hRM

Balances change constantly, check them on-chain (Tonviewer).

- **Bot-farm cleanup (Oct 2026):** mass bot and spam accounts were found and removed from the community chats to protect real holders and giveaways.
- **Contract security:** AGAMER uses the standard TON jetton contract, with admin rights revoked (the admin is the zero address). The contract has been checked by automated blockchain verification systems (e.g. explorer/tonviewer checks). No independent manual audit has been done.

8. Roadmap

ROADMAP

Agamer Universe stays on TON. AGAMER launches on Solana.

DONE

20 Apr 2025
AGAMER launched on TON. Admin rights revoked. First liquidity on STON.fi.

4 Jul 2025
Agamer NFT collection launched, with an airdrop to AGAMER holders.

2025
Agamer Marketplace, agamer.space, and 5 liquidity pools on STON.fi and DeDust.

Agamer Universe
The bot is live, with community chats and regular giveaways.

Oct 2026
Website rebuilt. Price widgets, @AgamerPriceBot, and the AgamerUniverse sticker pack.

Oct 2026
AGAMER on Solana announced. Launch date: 19 Jan 2027.

NOW

Agamer Universe on TON
Games in Agamer Universe continue on TON.

Listings
CoinGecko and CoinMarketCap listings, and regular posts on X (@agamercoin).

Solana preparation
Preparing the AGAMER coin on Solana and the one-way NFT swap for Rare, Epic and Legendary. The swap opens after the coin launch, in a window announced after the Solana launch, and closes before the prototype is released. No hub on Solana.

NEXT

1 Jan 2027
Public snapshot of TON AGAMER balances. Only wallets with at least 100 AGAMER on that date can swap.

1–18 Jan 2027

Coin burn window, 10 to 1. 100 AGAMER on TON gives 10 on Solana. Minimum 100. The window is not extended or reopened.

19 Jan 2027

AGAMER launches on Solana. Supply 999,000, the same as on TON.

Solana supply

10% reserved for the swap, 20% liquidity pool, 70% locked by smart contract with public terms. The unswapped part of the swap reserve is frozen with the 70%.

No hubs on Solana

The coin launches there, and a big Agamer game is announced. The team builds it. Q2 2027 at the earliest. It is a 3D open-world game with Solana and Agamer NFTs. The first version is a prototype (character, controls, a small map, wallet connection, NFTs shown in the game), then one polished location, then a large open world with multiplayer.

NFTs

The swap for Rare, Epic and Legendary opens after AGAMER launches on Solana, in a window announced after the Solana launch. The window closes before the prototype is released. After that, it is no longer possible. VIP, Common and Uncommon stay on TON forever. The swap is 1:1, one-way, and cannot be reversed. Total supply stays 1,000: a part moves to Solana permanently, and a part stays on TON permanently. Unsold Rare, Epic and Legendary NFTs owned by the project are taken off sale. They move to Solana and go on sale only after the prototype is released.

Agamer Universe stays on TON

After 18 Jan 2027 as well: mini games, giveaways and similar as before, coin freezing as planned, and a hub for games from other developers.

YOU CHOOSE

Stay on TON, move to Solana, or have both with the coin. Only Rare, Epic and Legendary NFTs can move to Solana, and only before the prototype of the game is released. VIP, Common and Uncommon stay on TON forever. TON AGAMER stays on TON forever as the original token. Trading and pools stay. LP tokens are burned, so liquidity cannot be withdrawn.

agamer.space

Русская версия дорожной карты

Done - 20 Apr 2025: AGAMER coin launched on TON with admin rights revoked and the first liquidity on STON.fi - Free airdrops for AGAMER holders - 4 Jul 2025: Agamer NFT collection launched, with an NFT airdrop to AGAMER holders - Agamer Marketplace launched (2025) - Nov 2025: agamer.space website launched - Community chats for NFT and coin holders, with regular giveaways - 5 liquidity pools on STON.fi and DeDust - Agamer Universe bot launched - Oct 2026: website rebuilt, CoinGecko and CoinMarketCap applications submitted, ton-assets PR opened - Oct 2026: price widgets for Android and iOS, and @AgamerPriceBot with buy alerts - Oct 2026: bot-farm cleanup in the community chats - Oct 2026: AgamerUniverse sticker pack - Oct 2026: AGAMER on Solana announced (launch 19 Jan 2027)

In progress - Moving the website to a dedicated server - Games in Agamer Universe on TON - CoinGecko and CoinMarketCap listings - Regular activity on X (@agamercoin) - Preparing the AGAMER coin on Solana and the one-way NFT swap for Rare, Epic and Legendary. The NFT swap opens after the coin launch, in a window announced after the Solana launch, and closes before the prototype of the game is released. There is no hub on Solana

Next (from the Phase 2 plan, Nov 2025, updated 18 Oct 2026) - Before 1 Nov 2026: deposits and withdrawals re-enabled - End of 2026: minigames in Agamer Universe on TON - 1 Jan 2027: public snapshot of TON AGAMER balances (anti-bot protection: only wallets holding at least 100 AGAMER on that date can swap); burning starts right after it - 1 Jan - 18 Jan 2027: coin swap window: burn TON AGAMER at 10 to 1 (100 AGAMER on TON gives 10 on Solana), minimum 100 AGAMER. The window is not extended or reopened after launch - 19 Jan 2027: AGAMER launch on Solana, supply 999,000 (same as on TON). There are no hubs on Solana. The coin launches there, and a big Agamer game is announced, which the team builds itself. It is a 3D open-world game with Solana and Agamer NFTs. The first version is a prototype (playable core: character, controls, a small map, wallet connection, and NFTs shown in the game), then one polished location, then growth into a large open world with multiplayer - Solana supply: 10% reserved for the swap, 20% liquidity pool, 70% locked by smart contract with public terms. The unswapped part of the swap reserve is frozen with the 70% - Right after the 19 Jan 2027 launch: Solana AGAMER is sent to the wallets of everyone who burned TON AGAMER, based on burns verified on-chain, from the 10% swap reserve - Q2 2027 at the earliest: the big Agamer game, a 3D open-world game with Solana and Agamer NFTs. The first version is a prototype (playable core: character, controls, a small map, wallet connection, and NFTs shown in the game), then one polished location, then growth into a large open world with multiplayer - The TON-to-Solana swap for Rare, Epic

and Legendary NFTs opens after AGAMER launches on Solana, in a window announced after the Solana launch. The window closes before the prototype of the game is released. After that, swapping a TON Agamer NFT for a Solana one is no longer possible. Only NFTs of rarity Rare, Epic and Legendary can be swapped. VIP, Common and Uncommon NFTs stay on TON forever. Rare to Legendary NFTs were originally designed for the game. The swap is 1:1: the holder gives the TON NFT and receives the same one on Solana. It is one-way and cannot be reversed. Total supply stays 1,000: a part moves to Solana permanently, and a part stays on TON permanently. All Rare, Epic and Legendary NFTs owned by the project and not bought are taken off sale. They will move to Solana and be available for sale only after the prototype is released - Agamer Universe stays on TON after 18 Jan 2027: mini games, giveaways and similar as before, coin freezing as planned, and a hub for games from other developers - Paid giveaways in games removed (free giveaways only) - Everyone chooses what to do with their coin: stay on TON, move to Solana, or have both. Only Rare, Epic and Legendary NFTs can move to Solana, and only before the prototype of the game is released - TON AGAMER stays on TON forever as the original token. Trading and pools stay. LP tokens are burned so liquidity cannot be withdrawn - Gaming experiences (minigames, interactive challenges) (timing TBD) - Agamer community on the major social platforms (timing TBD) - Agamer art, lore and storytelling (timing TBD) - Collaborations with creators, artists and gaming communities (timing TBD) - Physical merch and premium collectibles (timing TBD) - Partnerships across Web3 and gaming (timing TBD)

9. Risks and disclaimer

This document is for information only. It is not financial advice or an offer of securities. Crypto assets are highly volatile, and the value of AGAMER can fall to zero. Liquidity is low, so large trades can move the price a lot. Plans and timelines may change. Always do your own research and check the contract and wallets on-chain. Agamer is a community-driven project. There is no legal entity behind it.
